ПРИРОДНО-МАТЕМАТИЧКИ ФАКУЛТЕТ

FACULTY OF NATURAL SCIENCES AND MATHEMATICS

CHEMISTRY DEPARTMENT FIRST CYCLE OF STUDY Chemistry/Chemistry Education

Course codeCourse statusSemesterHours of instructionECTS1C16HOS1101requiredIV2+36Teacher(s)Porf. Mališa Antić PhDPrerequisite course(s)Entry requrementsAnalytical Chemistry 1 and Analytical Chemistry 2Attended coursesCourse goalsIntroduction to methods for taking and storing samples (sampling) in solid, liquid and gaseous state. Introduction to methods for preparation and purification of solid, liquid and gaseous samples for instrumental analysis.Learning outcomesAfter passing the exam in course Sampling and preparation of samples for chemical analysis.Course contentMethods for taking samples (sampling) in solid, liquid and gaseous state. Storage and protection of samples.Preparation of inorganic samples in solid state (soll, sediment) for instrumental analysis. Preparation of inorganic samples in solid state (soll, sediment) for instrumental analysis. Preparation of organic samples in liquid state (water) for instrumental analysis. Preparation of organic samples in solid state for instrumental analysis. Preparation of olatile organic samples in liquid state for instrumental analysis.Preparation of lov volatile organic samples in liquid state for instrumental analysis.Preparation of low volatile organic samples in liquid state for instrumental analysis.Preparation of low volatile organic samples in liquid state for instrumental analysis.Preparation of low volatile organic samples in liquid state for instrumental analysis.Preparat	Course name	Sampling and Preparation of Samples for Chemical Analysis					
Teacher(s) Prof. Mališa Antić PhD Prerequisite course(s) Entry requrements Analytical Chemistry 1 and Analytical Chemistry 2 Attended courses Course goals Introduction to methods for taking and storing samples (sampling) in solid, liquid and gaseous state. Introduction to methods for preparation and purification of solid, liquid and gaseous samples for instrumental analysis. Learning outcomes After passing the exam in course Sampling and preparation of samples for chemical analysis, the student should have the ability to independently take and prepare a sample for chemical analysis. Course content Methods for taking samples (sampling) in solid, liquid and gaseous state. Storage and protection of samples. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of norganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of volatile organic samples in liquid state (water) for instrumental analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state (soil, sediment) for instrumental analysis. Preparation of gaseous samples in solid state for instrumental analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis.	Course code	Course status	Semeste	er Hours of inst	ruction	ECTS	
Prerequisite course(s) Entry requrements Analytical Chemistry 1 and Analytical Chemistry 2 Attended courses Course goals Introduction to methods for taking and storing samples (sampling) in solid, liquid and gaseous state. Introduction to methods for preparation and purification of solid, liquid and gaseous samples for instrumental analysis. Learning outcomes After passing the exam in course Sampling and preparation of samples for chemical analysis, the student should have the ability to independently take and prepare a sample for chemical analysis. Course content Methods for taking samples (sampling) in solid, liquid and gaseous state. Storage and protection of samples. Preparation of inorganic samples (sampling) in solid, sediment) for instrumental analysis. Preparation of organic samples in solid state (soil, sediment) for instrumental analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of organic samples in solid state for instrumental analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples and malysis, A Practical Guide, Lewis Publishers, Chelsea, 1991. 1. L.H. Keith: E	1C16HOS1101	required	IV	2+3		6	
Analytical Chemistry 1 and Analytical Chemistry 2 Attended courses Course goals Introduction to methods for taking and storing samples (sampling) in solid, liquid and gaseous state. Introduction to methods for preparation and purification of solid, liquid and gaseous samples for instrumental analysis. Learning outcomes After passing the exam in course Sampling and preparation of samples for chemical analysis, the student should have the ability to independently take and prepare a sample for chemical analysis. Course content Methods for taking samples (sampling) in solid, liquid and gaseous state. Storage and protection of samples. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of organic samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples and Analysis, A Practical Guide, Lewis Publishers, Chelsea, 1991. 1. LH. Keith: Environmental Sampling and Analysis, A Practical Guide, Lewis Publishers, Chelsea, 1991. 2. W.G. Cochran: Sampling Techniques, Wiley, New York, 1977.	Teacher(s)	Prof. Mališa Antić PhD					
Analytical Chemistry 1 and Analytical Chemistry 2 Attended courses Course goals Introduction to methods for taking and storing samples (sampling) in solid, liquid and gaseous state. Introduction to methods for preparation and purification of solid, liquid and gaseous samples for instrumental analysis. Learning outcomes After passing the exam in course Sampling and preparation of samples for chemical analysis, the student should have the ability to independently take and prepare a sample for chemical analysis. Course content Methods for taking samples (sampling) in solid, liquid and gaseous state. Storage and protection of samples. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of organic samples in solid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of organic samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples and Analysis, A Practical Guide, Lewis Publishers, Chelsea, 1991. . Lectures, seminar work, field and laboratory exercises. Books and other learning materials 1. LH. Keith: Environmental Sampling and Analysis, A Practical Guide, Lewis Publishers, Chelsea, 199							
Course goals Introduction to methods for taking and storing samples (sampling) in solid, liquid and gaseous state. Introduction to methods for preparation and purification of solid, liquid and gaseous samples for instrumental analysis. Learning outcomes After passing the exam in course Sampling and preparation of samples for chemical analysis, the student should have the ability to independently take and prepare a sample for chemical analysis. Course content Methods for taking samples (sampling) in solid, liquid and gaseous state. Storage and protection of samples. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of inorganic samples in solid state (soil, sediment) for ganic samples in solid state for instrumental analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for instrumental analysis. Preparation of volatile organic samples in liquid state for instrumental analysis. Preparation of samples, field and laboratory exercises. Books	Prerequisite course(s)	Entry requrements					
Introduction to methods for taking and storing samples (sampling) in solid, liquid and gaseous state. Introduction to methods for preparation and purification of solid, liquid and gaseous samples for instrumental analysis. Learning outcomes After passing the exam in course Sampling and preparation of samples for chemical analysis, the student should have the ability to independently take and prepare a sample for chemical analysis. Course content Methods for taking samples (sampling) in solid, liquid and gaseous state. Storage and protection of samples. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of organic samples in solid state for instrumental analysis. Preparation of low volatile organic samples in liquid state for instrumental analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis Preparation of volatile organic samples analysis. Eaching methods Lectures, seminar work, field and laboratory exercises. Books and other learning materials 1. L.H. Keith: Environmental Sampling and Analysis, A Practical Guide, Lewis Publishers, Chelsea, 1991. 2. W.G. Cochran: Sampling Techniques, Wiley, New York, 1977. 3. F. Rouessac, A. Rouessac: Chemical Analysis – Modern Instrumentation Methods and Techniques, Wiley, Chichester, 2007. Course activities and grading method Seminary work. Oral exam. Activity 10 Tests 30 Final exam 60 Additional course notes /	Analytical Chemistry 1 and A	Attended courses					
methods for preparation and purification of solid, liquid and gaseous samples for instrumental analysis. Learning outcomes After passing the exam in course Sampling and preparation of samples for chemical analysis, the student should have the ability to independently take and prepare a sample for chemical analysis. Course content Methods for taking samples (sampling) in solid, liquid and gaseous state. Storage and protection of samples. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of volatile organic samples in liquid state for instrumental analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of solid state for instrumental analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Preparation of solatile organic samples and not volatile organic samples analysis. Preparation of gaseous samples for chemical analysis. Preparation of volatile organic samples in liquid state for analysis. Preparation of gaseous samples for chemical analysis. Precharge methods	Course goals						
Learning outcomes After passing the exam in course Sampling and preparation of samples for chemical analysis, the student should have the ability to independently take and prepare a sample for chemical analysis. Course content Methods for taking samples (sampling) in solid, liquid and gaseous state. Storage and protection of samples. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of inorganic samples in solid state (soil, sediment) for instrumental analysis. Preparation of organic samples in solid state for instrumental analysis. Preparation of volatile organic samples in liquid state for analysis.
